Research Interests

My research interests center on robot learning, with the goal of enabling robots to acquire useful skills from data and improve through experience. I am particularly interested in the expressive capabilities of generative models, including diffusion and flow models, for representing diverse behaviors and generating effective actions in complex environments.

I am also interested in developing learning methods that turn these capabilities into reliable decision-making. In particular, I aim to understand how reinforcement learning can improve generative policies while preserving useful behaviors learned from data. This includes learning from existing datasets, refining policies through interaction, and making learning more stable and efficient. Ultimately, I hope to connect advances in generative modeling and reinforcement learning to robots that can adapt to new tasks and situations.

Education

2026.09 - Present **Korea Advanced Institute of Science and Technology (KAIST)**
M.S. in Artificial Intelligence (in progress)
Advised by Prof. Jaegul Choo.

2020.03 - 2026.08 **Seoul National University**
B.S. in Industrial Engineering (GPA: 3.7/4.3)
Graduated as cum laude.

Research

2026 **FlashDexRetarget: Accelerating Dexterous Manipulation Data Generation through Multi-Motion Retargeting**

Kyungmin Lee*, Sibeon Kim*, Dongyoon Hwang*, **Yoonsang Oh***, Donghu Kim, Youngdo Lee, I Made Aswin Nahrendra, Jaegul Choo†, Hojoon Lee†

* Equal contribution; † Corresponding author

A multi-motion retargeting framework that converts human hand-object demonstrations into physically grounded robot manipulation trajectories using a shared reinforcement learning policy.
