Research Interests

My research interests lie in robot learning, particularly in using generative models to help robots acquire useful skills. I am interested in developing reinforcement learning methods that improve policies based on diffusion and flow models through data and interaction, with an emphasis on stable, efficient learning and adaptation to new tasks.

Education

Korea Advanced Institute of Science and Technology (KAIST)

M.S. in Artificial Intelligence (in progress)

2026.09 - Present

Advised by Prof. Jaegul Choo.

Seoul National University

B.S. in Industrial Engineering (GPA: 3.7/4.3)

2020.03 - 2026.08

Graduated as cum laude.

Research

FlashDexRetarget: Accelerating Dexterous Manipulation Data Generation through Multi-Motion Retargeting 2026

Kyungmin Lee^{}, Sibeon Kim^{*}, Dongyoon Hwang^{*}, Yoonsang Oh^{*}, Donghu Kim, Youngdo Lee, I Made Aswin Nahrendra, Jaegul Choo[†], Hojoon Lee[†]*

^{*} Equal contribution; [†] Corresponding author

- A multi-motion retargeting framework that converts human hand-object demonstrations into physically grounded robot manipulation trajectories using a shared reinforcement learning policy.

Projects

Scene-Aware Humanoid Locomotion via Unreal Engine Data Generation 2026.01 - 2026.05

Kyungmin Lee, Yoonsang Oh, Jaegul Choo, Hojoon Lee, Beomjoon Kim

- An Unreal Engine pipeline for generating terrain-aligned Unitree G1 motion data, with motion retargeting, custom inverse kinematics, and teacher-student policy learning for locomotion on uneven terrain.
